Energy performance certificate (EPC)

Mid-terrace house

Total floor area

92 square metres

Rules on letting this property

You may not be able to let this property

This property has an energy rating of G. It cannot be let, unless an exemption has been registered. You can read guidance for landlords on the regulations and exemptions (https://www.gov.uk/guidance/domestic-private-rented-propertyminimum-energy-efficiency-standard-landlord-guidance).

Properties can be rented if they have an energy rating from A to E. The <u>recommendations section</u> sets out changes you can make to improve the property's rating.

Energy efficiency rating for this property

This property's current energy rating is G. It has the potential to be B.

See how to improve this property's energy performance.

Score	Energy rating	Current	Potential
92+	Α		
81-91	B		89 B
69-80	С		
55-68	D		
39-54	E		
21-38	F		
1-20	G	15 G	

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher this number, the lower your carbon dioxide (CO2) emissions are likely to be.

The average energy rating and score for a property in England and Wales are D (60).

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says 'assumed', it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Wall	Solid brick, as built, no insulation (assumed)	Very poor
Roof	Pitched, 270 mm loft insulation	Good
Roof	Pitched, 250 mm loft insulation	Good
Window	Some double glazing	Poor
Main heating	Portable electric heaters assumed for most rooms	Very poor

Feature	Description	Rating
Main heating control	No thermostatic control of room temperature	Poor
Hot water	Electric immersion, standard tariff	Very poor
Lighting	No low energy lighting	Very poor
Floor	Suspended, no insulation (assumed)	N/A
Floor	Solid, no insulation (assumed)	N/A
Secondary heating	Room heaters, mains gas	N/A

Primary energy use

The primary energy use for this property per year is 532 kilowatt hours per square metre (kWh/m2).

What is primary energy use?

Environmental impact of this property

One of the biggest contributors to climate change is carbon dioxide (CO2). The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO2 emissions.

An average household produces

This property produces

8.3 tonnes of CO2

6 tonnes of CO2

This property's potential production

1.1 tonnes of CO2

By making the <u>recommended changes</u>, you could reduce this property's CO2 emissions by 7.2 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

How to improve this property's energy performance

Making any of the recommended changes will improve this property's energy efficiency.

If you make all of the recommended changes, this will improve the property's energy rating and score from G (15) to B (89).

What is an energy rating?

Recommendation 1: Internal or external wall insulation

Internal or external wall insulation

Typical installation cost

Typical yearly saving

Potential rating after carrying out recommendation 1

Floor insulation (suspended floor)

	-	-
Typical	VOORIN	oovina
Typical	veariv	Savinu
.,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	J J	

Potential rating after carrying out recommendations 1 and 2

Recommendation 3: Floor insulation (solid floor)

Floor insulation (solid floor)

Typical installation cost

£4,000 - £6,000

Potential energy

rating

£4,000 - £14,000

£508

25 | F

£800 - £1,200

£72

26 | F

Potential rating after carrying out recommendations 1 to 3	
	27 F
Recommendation 4: Hot water cylinder insulation	
Insulate hot water cylinder with 80 mm jacket	
Typical installation cost	
	£15 - £30
Typical yearly saving	
	£393
Potential rating after carrying out recommendations 1 to 4	
	36 F
Recommendation 5: Draught proofing	
Draught proofing	
Typical installation cost	
	£80 - £120
Typical yearly saving	
	£60
Potential rating after carrying out recommendations 1 to 5	
	38 F

Recommendation 6: Low energy lighting

Low energy lighting

Typical installation cost

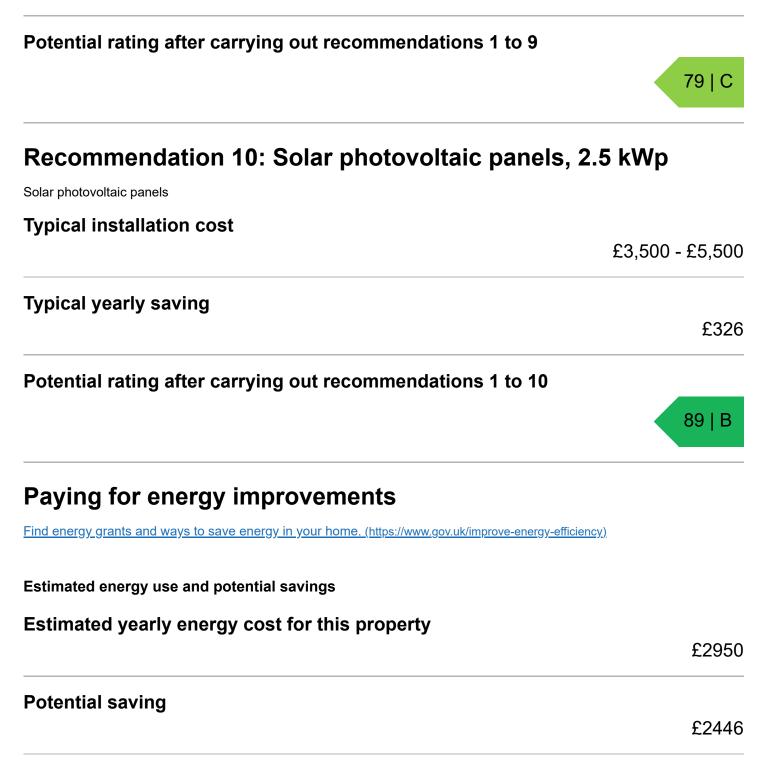

Recommendation 7: Change room heate boiler	rs to condensing
Condensing boiler	
Typical installation cost	
	£3,000 - £7,000
Typical yearly saving	£1,219
Potential rating after carrying out recommendations	1 to 7
	75 C
Recommendation 8: Solar water heating	
Solar water heating	
Typical installation cost	
	£4,000 - £6,000
Typical yearly saving	
	£39
Potential rating after carrying out recommendations	1 to 8
	77 C
Recommendation 9: Double glazed wind	ows
Replace single glazed windows with low-E double glazed windows	

Typical installation cost

£3,300 - £6,500

39 | E

Typical yearly saving

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The estimated saving is based on making all of the recommendations in how to improve this property's energy performance.

For advice on how to reduce your energy bills visit Simple Energy Advice (https://www.simpleenergyadvice.org.uk/).

Heating use in this property

Heating a property usually makes up the majority of energy costs.

Estimated energy used to heat this property

Space heating

Water heating

5143.0 kWh per year

Potential energy savings by installing insulation		
Type of insulation	Amount of energy saved	
Loft insulation	76 kWh per year	
Solid wall insulation	3142 kWh per year	

You might be able to receive <u>Renewable Heat Incentive payments (https://www.gov.uk/domestic-renewable-heat-incentive)</u>. This will help to reduce carbon emissions by replacing your existing heating system with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments.

Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
